

Emirates NBD's “Digital from the Core” Transformation

November 2019

Emirates NBD is the Middle East's largest bank with a significantly advanced digital agenda

Key figures

A leading banking group in the MENA region offering core financial services along **corporate, retail, Islamic, and investment banking**

~23,000 employees from 70 nationalities

~1,000 branches

~7,000 ATMs

~\$170B asset size

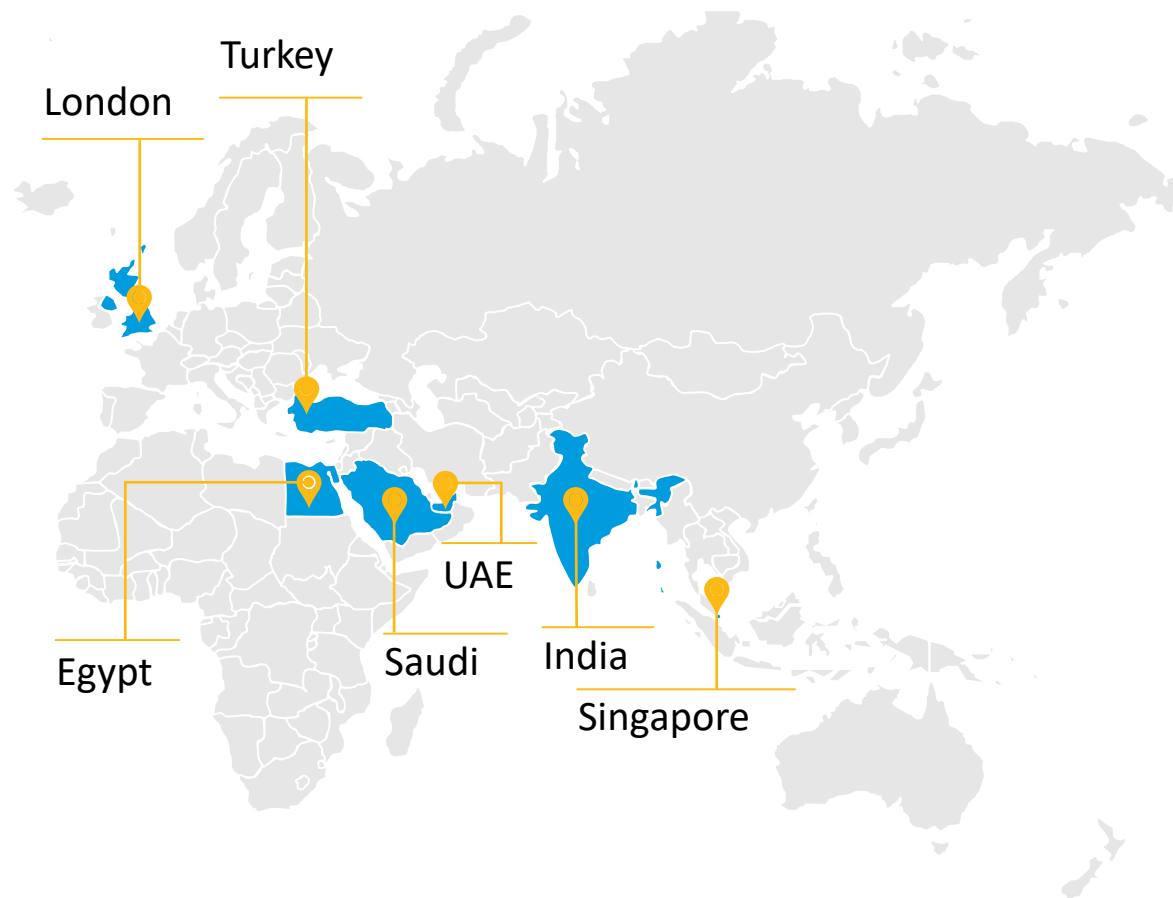

~\$2.5B net profit

31% Cost-income ratio

Countries of operations

Operating in 7 countries

Awards (2017-2019)

BAI Global Awards:
Most Innovative Financial Services Organization in the World

BAI Global Awards:
Best Internet Banking Application

Retail Banker Global Awards:
Best Retail Bank in the Middle East

Asian Banker: Best Digital Bank in the Middle East

In order to maintain this position we identified the need for a deep broad IT transformation

Key challenges identified to our current position

1 Remain a **innovation leader** in digital on worldwide scale

- Fitness account (42% full digital sales, 85% STP)
- WhatsApp banking
- Blockchain (Liv., E20.)

2 Outperform the **competitive landscape** including fintech

- Cloud
- Agile
- Dev. OPS

3 Set-up **platform** to support our ongoing growth and latest technologies

Embark on a deep broad IT transformation

- New way of working
- New technology
- New business model

To support our business ambitions we needed to structure the IT transformation along 4 pillars

What we identified as key needs from business...

- New digital experience
 - Fast and continuous development of our service offering
-
- Build an ecosystem
 - Scale our international footprint
 - Support latest technology
-
- Support new cryptocurrencies
 - Reduce cost
-
- Become and remain fully resilient

Competitive requirements

...and how we have structured the transformation

- >  **1** Interval operating model and business – IT interface
-
- >  **2** Architecture
-
- >  **3** Infrastructure
-
- >  **4** Cybersecurity

Transformation workstreams

The corresponding transformation program is comprehensive including numerous dependencies

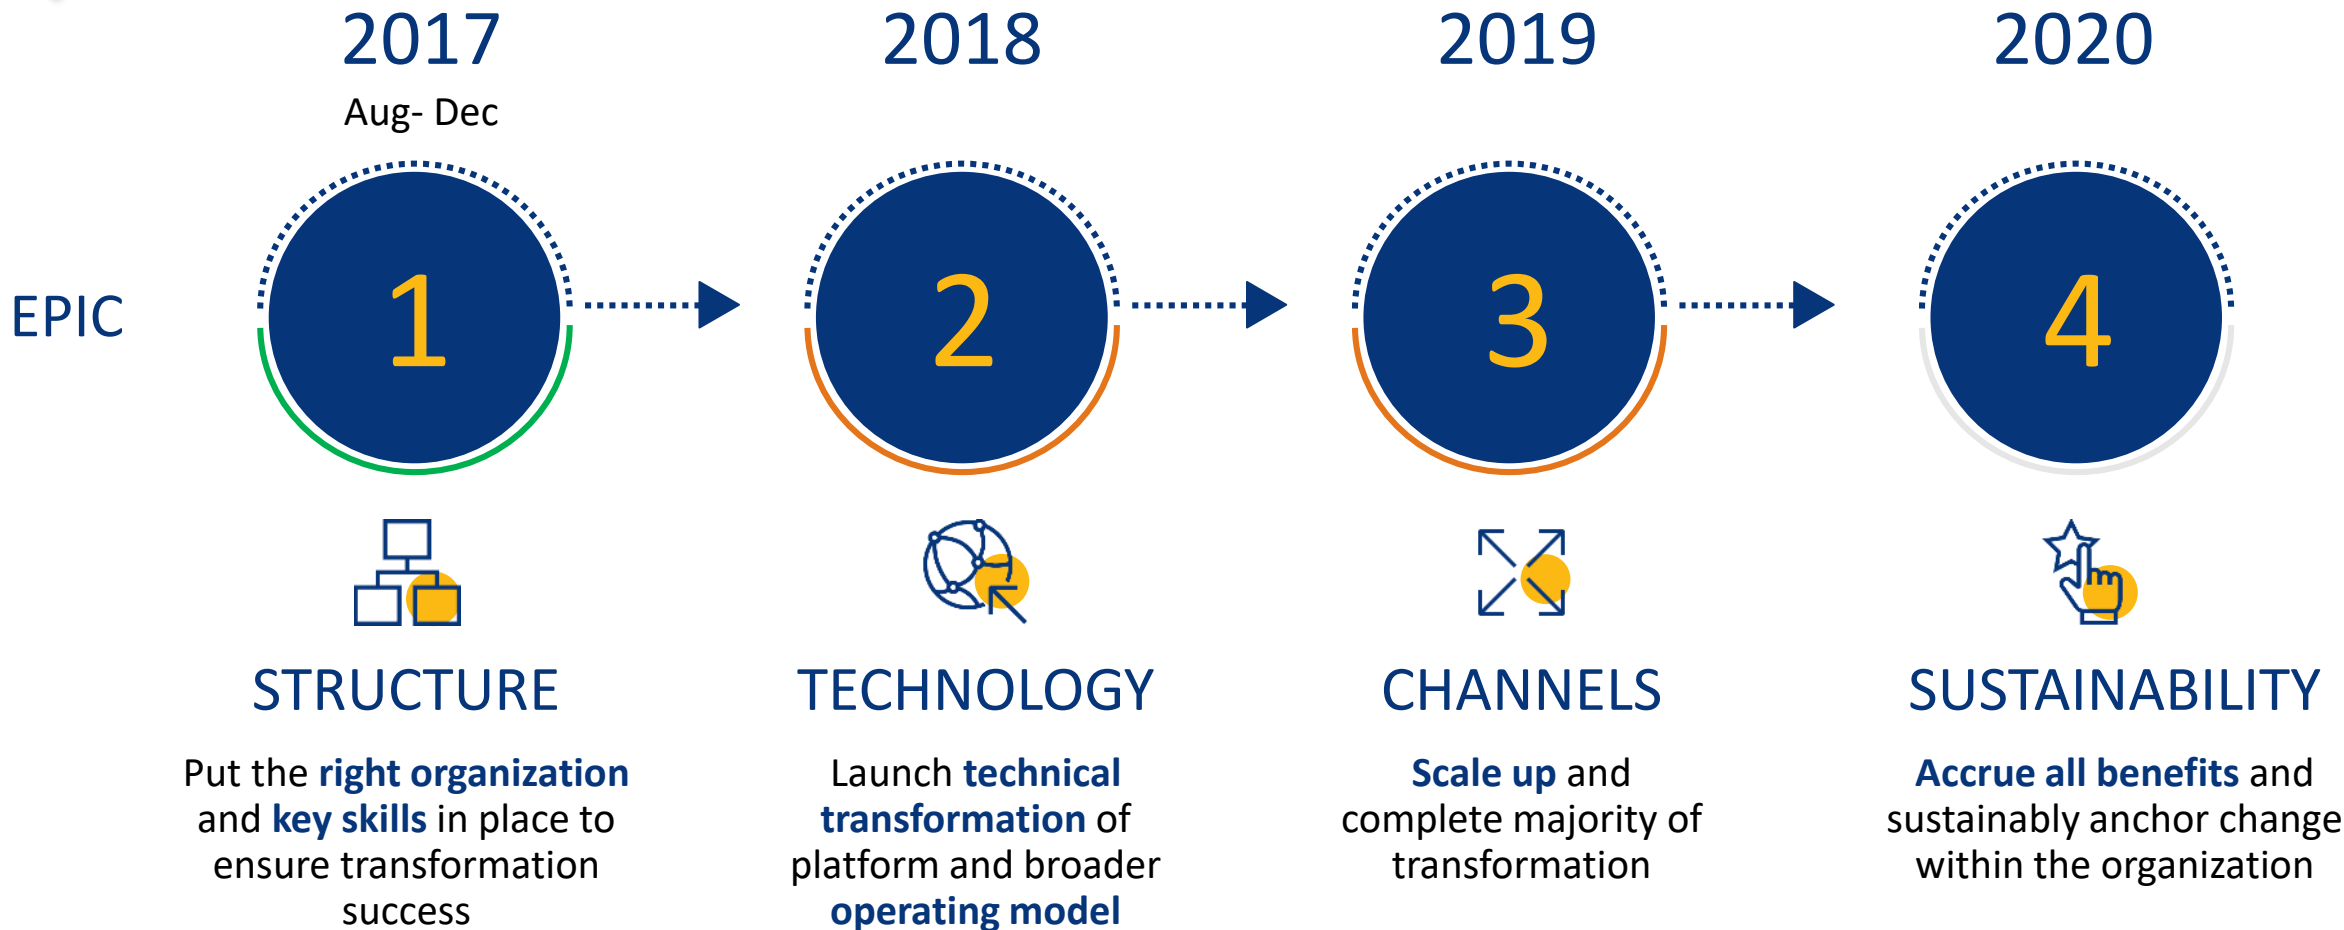

Build up and train business analysts and PMs (Business Side)	Establish new managerial roles in the IT organization	Frontend & middleware built as <ul style="list-style-type: none"> ▪ Omnichannel ▪ 2- speed ▪ 3rd party / digital ecosystem 	Reduce current infrastructure complexity	Upgrade security access and monitoring control
Transform business partners role	Implement best practice resourcing model	Make core systems digital ready	Upgrade key infrastructure components	Upgrade security malware control
Align and implement new IT project budgeting and portfolio process	Implement new procurement process/ governance	Build a digital-ready payments hub	Set up a cloud platform for capital light scalability	Upgrade security mobile control
Establish new BU-IT project reporting and governance regime	Establish data governance including data modeling	Implement a treasury and trade finance end-to-end IT platform	Upgrade current network and bandwidth	Upgrade security data control
Establish an agile working model	Transform current testing function	Establish EDW as a single source of truth regulation for Bank steering 2.0 and next generation analytics		Implement security code controls
	Implement new KPIs aligned with transformation needs			
	Launch employee satisfaction and talent retention initiatives			

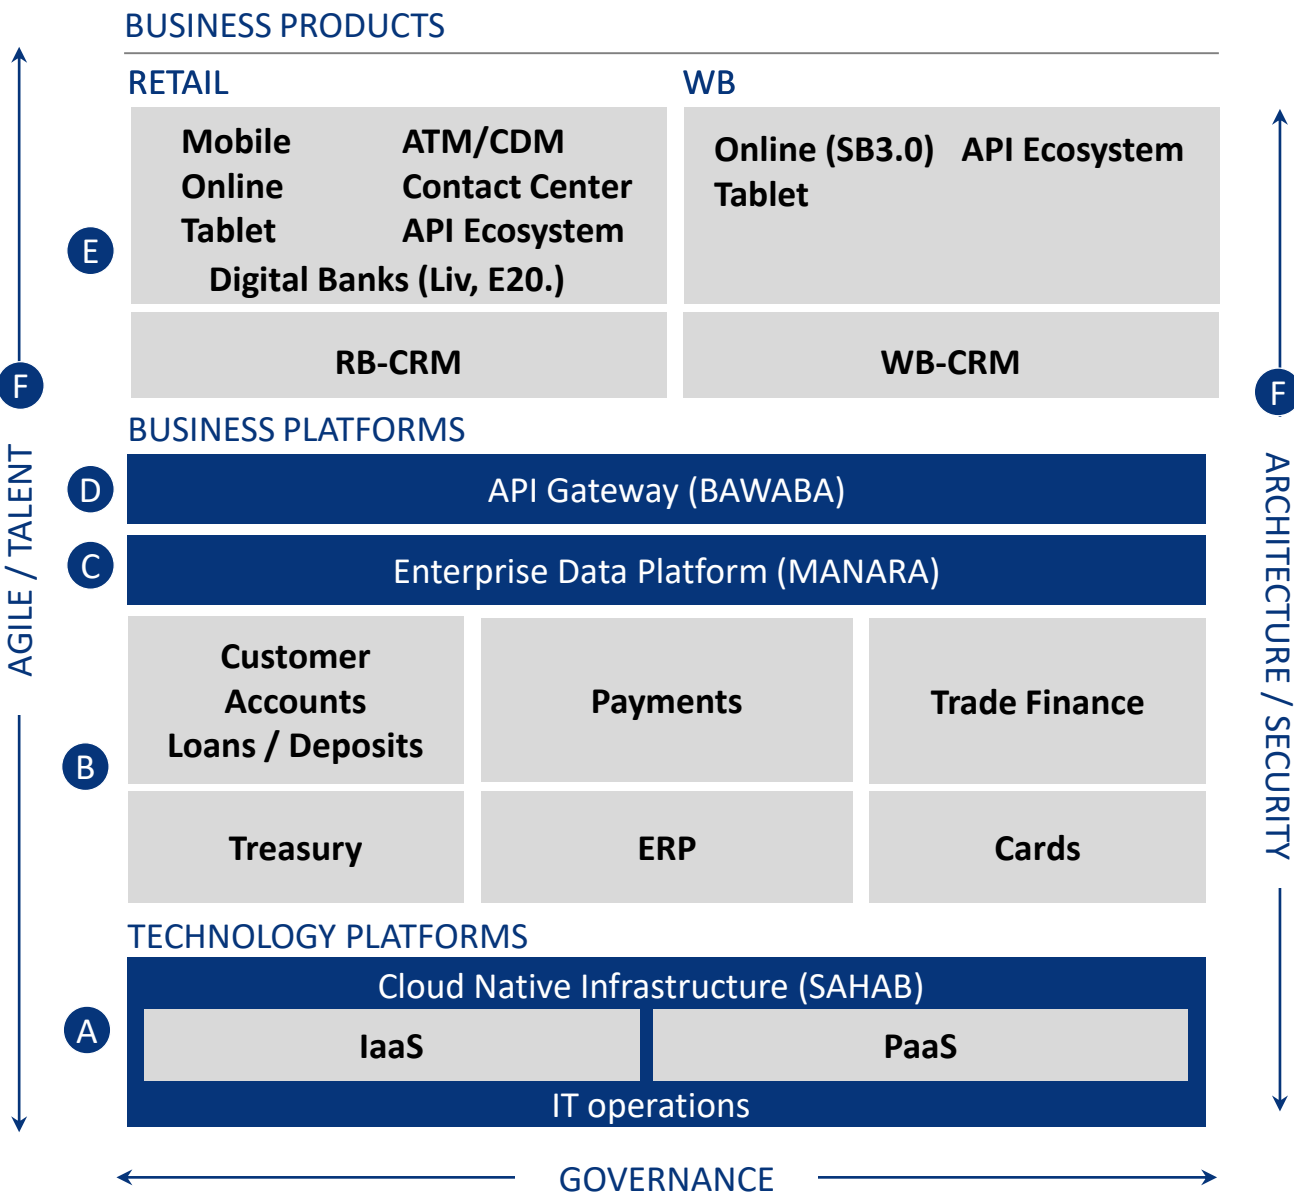

We are in the third year of our transformation – EPIC 3 focuses on scaling our technology transformation and the new operating model

 Ongoing

 Completed

We are making a quantum leap in modernizing our technology platforms and capabilities including a new standardized core across all our entities

- A** We have made our infrastructure **fully cloud native (53%)** allowing for significant gains in **speed (1/90)**, **cost (1/5)** and **quality (0 errors)**, enabling next-generation application development – micro-services – while allowing us to be prepared for a **datacenter-less future**
- B** We have standardized and de-customized our business platforms (cards, trade finance, treasury, ERP, core banking Singapore, London, KSA)
- C** We have made **all data of the bank available** in benchmark big-data platform for **next-generation AA use cases** and brought an industry standard data model to production
- D** We have enabled **+400 truly reusable, cloud native APIs** and made them available to our channels and external partners
- E** We have started our channels and CRM transformation, building **truly global multi-tenant applications**, while significantly improving design, functionality and architecture
- F** We went **"all in" on agile in IT**, clearly separating "how" from "what" roles, adopting agile principles and operating model and sourcing new talent

We have identified key learnings

Management support and buy-in is key to develop the IT transformation to a true successful business transformation

Aim only for the best people – taking in B candidates will make you struggle continuously

Assess and strictly manage your vendors – quality and commitment is often questionable

If you want to do everything in parallel you need to build proper architectural separations (data vaults, API layers, etc.)

Do not lock yourself into vendors – coaching and training resources and making engineering a part of the organizational culture is key

You will need to push back to business – they will need to hold back for a period of time to get to a better future

Communication and change management cannot be under-emphasized – communicating and explaining a transformation is the key measure for success
